Current Cost Launches New Corporate Website

Energy Monitor Specialists Introduce New Information-Rich Corporate Site

Current Cost, the global manufacturer of energy monitoring technology, has launched a new corporate site specifically created for existing and potential partners, as well as utility companies. Always striving to provide the most up to date and easily accessible information for all customers, Current Cost have launched the site for its corporate audience who wish to find out more about becoming part of the Current Cost network, engage with them as a Utility company, or find out about the latest key industry topics or the history surrounding Current Cost.

Running alongside www.currentcost.com, the new site aims to make navigation easier for consumers and businesses alike to find information most pertinent to their needs. Direct consumers can still use the original site to access information regarding their home energy monitor and link more easily to the online retail areas. However, corporate audiences will now be able to use www.currentcostgroup.com to find out more about the very latest in technology being developed by Current Cost, as well as the latest industry developments. For those hoping to become part of the growing Current Cost partner network, key contacts and criteria can be found on the new site too.

Notes to Editors:

- Current Cost was founded in 2004 and is the UK's most experienced manufacturer of real time displays for monitoring domestic electricity usage. The company continues to lead the market in innovation and was the first manufacturer to supply RTDs to the Top Six energy companies. Current Cost continues to lead the market in innovative RTD design and is the largest supplier worldwide, with over 1.5 million monitors installed to-date. C2 proprietary technology is found in all the company's range of devices and is available in individual recognition plugs, standard meters and load management devices. The information gathered by the C2 software can be downloaded to a PC or as a part web application, so that households, housing associations and any other organisation can track improvement in energy efficiency and reduce wastage.
